Hunting is yet in progress in the old "Free State" several deer have recently been killed. Lunenburg is the only country in the Old Dominion that is absolutely without a game law. Any kind of wild animal is shot down in this county and at any time and nothing is said whatever. And yet Lunenburg has plenty of game left. Deer are said to be more plentiful than they were ever known to be before, notwithstanding the number killed this season has surpassed all previous records. Two young ones were captured here in the early part of the fall and disposed of at fifteen dollars each to a party in North Carolina.

Week in Richmond.
Speaking of roads, an effort is soon to be made here to make a practical beginning in their permanent improvement. At the next meeting of the Board of Trade, which will be on next Friday night, a resolution will be introduced to request the Legislature to permit the two magisterial districts tributory to this place to put upon themselves just what road levy they may see fit; to be expended in those districts for permanent road improvement.
Should this be done there is no doubt that a sufficient amount will soon be raised to put our roads in good and lasting condition, as the people of this section are beginning to realize the need and

The system of water works, the construction of which were begun in November, are nearing completion and will scot be in thorough working order. Nearly all the piping is laid and the connections will scot be made. The supply is from a well 300 feet deep and is of excellent quality.

The new electric light plant is also under construction and many of the poles for carrying the wires have been placed in position. This will prove quite an improvement to the town, both for public and private benefits.

Construction is to be begun as soon as a charter can be secured, which, under the ruling of the Legislature, cannot be done until the term of the new Corporation Commission begins. This will be the let of March.

Parties are considering the advisability of locating a foundry and machine shops here. This is undoubtedly a good point for such an enterprise since much machinery is operated in this vicinity, including the many saw-mills tributory to this place.

An important change among two business houses took place here this week resulting in the combination of the clothing department of the Seay-Bagiey Company with the clothing house of W. I. Jones. Both firms have been in business some time, but have decided to combine their business in this department. A bright future is predicted for them.

Thus far there have been over three hundred handled here since the opening of the season on the first of November. There is yet about two months of the active season remaining.

SOCIAL OPTION.

The local option question is still much in the forefront in this county. The election which it was hoped to hold this month cannot be held before April or May on account of local elections in the different town in the county. Under the amended charter of this place it is provided that the voters shall express themselves on this question at each annual election for town officers. This election comes off in March.

The bird season in this county closed with the ending of January. A great number have been killed during the season, although they are becoming harder and harder to get at each season. There are numbers of them lett, however, and no scarcity is looked for another season unless by bad weather between now and the close of the winter, or during hatching time next summer.

The hawks depredate in them a great deal all the year, but foxes do but little damage since there are but few reynards in this section; so few that the hunting of them has almost been abandoned by those who were wont to keep full packs of hounds.

Dr. B. Bridgforth, of Richmond, spent keep days of the past week with relatives in this vicinity enjoying the last few days of the bird season. He is an expert shot and many were bagged by him.

The weak races of people are the rice eating Chinese, Hindoos and Siamese, regarded since the dawn of history as non-progressive, superstitious and inferior physicially and mentally to the meat eating nations who dominate them.

The structure of the teeth plainly indicates that human beings should subsist upon a variety of food, meat, fruit and grains, and it is unhygiente to confine one's diet to any one of those classes to the exclusion of, another.

Meat is the most concentrated and most easily digested of foods, but our manner of living is often so unnatural that the digestive organs refuse to properly digest meat, eggs and similar nutritious and wholesome food, but it is not because such food is unwholesome, but the real reason is thatthe stomach lacks, from disease or weakness, some necessary digestive element; hence arising indigestion and later on, chronic dyspepsia.

A disease which effects the eyes is very prevalent here now. It causes a severe screness and inflammation, but no scrious results have been reported indigestion and later on, chronic dyspepsia.

Nervous people should cat plenty of meat, convalescents should make meat the principal food, hard working people have to do so and brain workers and office men should eat, not so much meat, but at least once a day and to insure its perfect digestion one or two of Stuart's Dyspepsia Tablets should be taken after each meal, because they supply the peptones, distase and fruit acids lacking in every case of stomach trouble.

Nervous dyspepsia, catarrh of stomach, gasiritis, sour stomach, gas and acidity are only different names for indigestion, the failure to digest wholesome food, and the use of Stuart's Catarrh Tablets cures them all because by affording perfect digestion the stomach has a chance to rest and recover its natural tone and vigor. "I wish to give my testimony to the efficiency of the Cuticura Reme-dies in what seems to me two some-what remarkable cases. I had a what remarkable cases. I had a number of skin tumours—small ones—on my arms which had never given me serious trouble; but about two years ago one came on my throat. At first it was only about as large as a pinhead, but, as it was in a position where my collar, if not just right, would irritate it, it soon became, very sensitive and began to grow rapidly. Last spring it was as large, if not larger, than a bean. A little unusual irritation of my collar started it to swelling, and in a day or two it was as large as half an orange.
